

SWIFTSHIP TRACKER

Book. Track. Deliver. Smarter.

A Salesforce Parcel Management Solution with Agentforce AI

PROJECT DOCUMENTATION

Project Title	SwiftShip Tracker
Platform	Salesforce Developer Edition (Agentforce, Prompt Builder, Flow)
Team Name	Parcel Trackers
Team Members	Yazhini M [23cs118] (Team Leader),Vinotha S [23cs114],Vishnupriya U [23cs116]
College / University	AVC College Of Engineering
Project Guide / Mentor	M.Ashley Monica
Submission Date	[03 October 2026]

SWIFTSHIP TRACKER

User Story

The SwiftShip Tracker is designed to provide a centralized Salesforce-based parcel management solution that enables customers to book parcels, track delivery status, and manage shipments through an intuitive interface and conversational AI support. The system manages Parcel, Delivery, Sender, and Receiver information using Salesforce custom objects and relationships. Flows automate parcel operations, while Agentforce AI and Prompt Builder enable customers to retrieve parcel information and interact with the system conversationally. Delivery agents can update parcel status, while security controls provide secure role-based access.

1. Introduction

1.1 Project Overview

SwiftShip Tracker is a Salesforce CRM solution developed to simplify parcel booking, shipment tracking, and delivery management. It supports the complete parcel lifecycle from booking and dispatch through tracking and delivery confirmation. Customers can access shipment information, while delivery agents can update parcel details and delivery status.

1.2 Purpose

- Centralize parcel and delivery information.
- Simplify parcel booking and tracking.
- Provide real-time shipment visibility.
- Automate delivery updates and customer notifications.
- Enable conversational parcel tracking using Agentforce AI and Prompt Builder.
- Improve agent efficiency through Salesforce Flows.
- Provide secure, role-based access to customers, agents, support staff, and administrators.

2. Ideation Phase

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Customer / Sender	Book a parcel easily	Booking requires support assistance or multiple applications	Parcel operations are not centralized	Frustrated
PS-2	Customer / Sender	Track my parcel	I do not have a simple real-time tracking experience	Shipment information is difficult to access	Confused
PS-3	Delivery Agent	Update parcel status	Status updates require manual handling	There is a need for centralized operational tracking	Concerned
PS-4	Customer	Receive delivery updates	Notifications may not be available at every delivery stage	Communication needs to be automated	Uncertain

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-5	Admin	Monitor parcel operations	Parcel flow and delivery performance are difficult to monitor	Operational data needs centralized reporting	Concerned

[Insert Screenshot: Problem Statements infographic]

2.2 Empathy Map Canvas

User Persona: Customer / Sender

Quadrant	Description
Think & Feel	Wants a simple way to book and track parcels without repeatedly contacting support.
Hear	Receives delivery information and status updates from the parcel service.
See	Parcel details, tracking status, estimated delivery date, and delivery information.
Say & Do	Books parcels, checks tracking information, and asks for delivery updates.
Pain	Delays, confusion, lack of easy tracking, and dependence on support or multiple apps.
Gain	Real-time visibility, self-service tracking, convenient booking, and timely notifications.

[Insert Screenshot: Empathy Map Canvas]

2.3 Brainstorming & Idea Prioritization

Ideas Considered

- Manual registers
- Spreadsheet tracking
- Standalone parcel portal
- Salesforce CRM with Agentforce AI

Final Selection

Salesforce CRM with Agentforce AI was selected due to:

- Centralized parcel management
- Automation through Flows
- Real-time tracking visibility
- Conversational AI assistance
- Secure role-based access
- Scalability for growing parcel operations

[Insert Screenshot: Brainstorming & Idea Prioritization infographic]

3. Requirement Analysis Phase

3.1 Customer Journey Map

Stage	Description	Customer Thought	Emotion
1. Parcel Inquiry	Customer checks parcel details, pricing and delivery options	"What are the delivery options and cost?"	Curious
2. Parcel Booking	Customer books a parcel by providing sender, receiver and parcel details	"That was easy to book!"	Happy
3. Record Creation	System creates a parcel record in Salesforce	"My parcel is now registered."	Confident
4. Dispatch	Parcel is picked up and dispatched from the origin location	"Great, my parcel is dispatched."	Satisfied
5. In-Transit Tracking	Parcel is in transit and can be tracked	"I can track my parcel in real time."	Reassured
6. Out for Delivery	Parcel is out for delivery to the receiver's location	"It's out for delivery now."	Anticipated
7. Delivery Confirmation	Parcel is delivered successfully	"My parcel is delivered!"	Delighted
8. Customer Notification	Customer receives notifications at every stage	"I got a notification."	Informed
9. Reporting	Data is captured for reporting and performance analysis	"I can see the summary and reports."	Satisfied

[Insert Screenshot: Customer Journey Map]

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	Parcel booking and record creation
FR-2	Parcel status tracking
FR-3	Weight management
FR-4	Estimated delivery date management
FR-5	Sender information management
FR-6	Receiver information management
FR-7	Delivery and current-location tracking
FR-8	Agent parcel status updates
FR-9	Automated customer notifications
FR-10	AI-powered parcel tracking
FR-11	Reports and dashboards

FR No	Requirement
FR-12	Customer access through Experience Cloud

Non-Functional Requirements

NFR	Description
Usability	Intuitive Salesforce and customer-facing interface
Security	Role-based and field-level access control
Reliability	Accurate parcel status and delivery information
Performance	Timely Flow and Agentforce responses
Availability	Salesforce cloud-based access
Scalability	Supports growing parcel and delivery operations
Data Integrity	Controlled access and relationship-based parcel data
Maintainability	Flows, prompts, topics and configurations can be updated

3.3 Data Flow Diagram

Main Flow

Customer / Sender → Parcel Booking → Parcel Record → Sender + Receiver Information → Delivery Record → Parcel Status Update → Current Location & Estimated Delivery → Automated Notifications → Customer Tracking / Agentforce AI → Reports & Dashboards

AI Tracking Flow

Customer Query → Agentforce AI → Prompt Builder (Retrieve Parcel Details) → Parcel Record → Status / Weight / Estimated Delivery → Conversational Response

The Prompt Builder implementation retrieves Parcel ID, Status, Weight and Estimated Delivery Date information for tracking responses.

[Insert Screenshot: Data Flow Diagram]

3.4 Technology Stack

Layer	Technology	Status
Platform	Salesforce Developer Edition	Implemented
Database	Salesforce Custom Objects (Parcel, Delivery, Sender, Receiver)	Implemented
Business Logic / Automation	Autolaunched Flow	Implemented
AI	Agentforce AI, Prompt Builder	Implemented
Security	Permission Sets, Field-Level Security	Implemented
UI	Custom Object Tabs, Lightning App, Experience Cloud	Tabs: Implemented; Experience Cloud: Planned
Automation (extended)	Record-Triggered Flows, Scheduled Flows, Apex, Batch Apex	Planned

Layer	Technology	Status
Notifications	Email Alerts and Email Templates	Planned
Security (extended)	Profiles, Role Hierarchy, Sharing Rules	Planned
Reporting	Reports & Dashboards	Planned

4. Project Design Phase

4.1 Problem–Solution Fit

Problem	Solution	Benefit
Parcel booking is difficult	Salesforce parcel management	Centralized booking
Tracking requires support	Agentforce AI + Prompt Builder	Self-service tracking
Manual status updates	Salesforce Flows	Automated processes
Delivery communication gaps	Email Alerts	Timely notifications
Scattered shipment information	Parcel, Delivery, Sender and Receiver objects	Structured data
Difficult operational monitoring	Reports & Dashboards	Better visibility
Different users need different access	Profiles, Roles and Permission Sets	Secure access

[Insert Screenshot: Problem–Solution Fit infographic]

4.2 Proposed Solution

Parameter	Description
Problem	Difficult and inefficient parcel booking and tracking
Solution	Salesforce-based Parcel Management System
Innovation	Agentforce AI + Prompt Builder for conversational self-service tracking, with Salesforce Flow automation
Impact	Centralized booking, real-time tracking visibility, timely notifications and efficient delivery management
Business Model	Parcel, customer, delivery-agent, support and administrator operations
Scalability	Supports growing parcel operations, Experience Cloud, and integration with external logistics systems

4.3 Solution Architecture

Layer	Components
Users	Customer Delivery Agent Support Staff Admin
Interface	Salesforce Lightning / Experience Cloud / Mobile App
Data Layer	Parcel__c, Delivery__c, Sender__c, Receiver__c
Automation Layer	Flows, Approval Processes, Apex Classes, Batch Apex, Email Alerts

Layer	Components
AI Layer	Agentforce AI, Prompt Builder, Parcel Tracking Agent
Security Layer	Profiles, Roles, Permission Sets, Sharing Rules, Field-Level Security
Output	Reports & Dashboards → Parcel Tracking & Operational Insights

[Insert Screenshot: Solution Architecture diagram]

5. Project Planning & Scheduling

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Product Backlog, Sprint Schedule, and Estimation

Sprint	Epic	USN	User Story / Task	Poin ts	Priorit y	Member
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to create and configure the Salesforce environment so that I can build the SwiftShip Tracker parcel management system.	3	High	Member 1
Sprint-2	Data Modeling	USN-2	As an admin, I want to create Parcel, Delivery, Sender and Receiver objects with proper relationships so that parcel and delivery data is stored systematically.	5	High	Member 2
Sprint-2	Data Modeling	USN-3	As a staff member, I want dedicated tabs and a Lightning App for SwiftShip modules so that I can easily navigate parcel and delivery operations.	5	High	Member 3
Sprint-3	Automatio n	USN-4	As a system, I want to validate parcel details, mandatory fields and booking inputs so that incomplete records are prevented.	3	High	Member 4
Sprint-3	Automatio n	USN-5	As a delivery coordinator, I want automated Flows to update parcel status and delivery information so that processing requires minimal manual effort.	3	High	Member 4
Sprint-4	Apex	USN-6	As a system, I want Apex triggers and classes to perform critical parcel and delivery actions accurately.	5	High	Member 1
Sprint-4	Apex	USN-7	As an operations manager, I want Batch Apex jobs to update parcel or delivery records automatically so that data stays accurate.	5	High	Member 2

Sprint	Epic	USN	User Story / Task	Poin ts	Priorit y	Member
Sprint-5	Reports	USN-8	As a manager, I want reports on parcel status, delivery performance and operational metrics so that I can make informed decisions.	4	High	Member 3
Sprint-6	Dashboards & AI	USN-9	As a manager, I want dashboards on key metrics, while Agentforce provides AI-powered tracking assistance.	4	Medium	Member 4

Project Tracker, Velocity & Burndown

Sprint	Total Story Points	Duration	Start Date	End Date (Planned)	Points Completed	Release Date (Actual)
Sprint-1	3	6 Days	[date]	[date]	[points]	[date]
Sprint-2	10	6 Days	[date]	[date]	[points]	[date]
Sprint-3	6	6 Days	[date]	[date]	[points]	[date]
Sprint-4	10	6 Days	[date]	[date]	[points]	[date]
Sprint-5	4	6 Days	[date]	[date]	[points]	[date]
Sprint-6	4	6 Days	[date]	[date]	[points]	[date]

Velocity: Total story points = 37 across 6 sprints, giving an average velocity of about 6.2 story points per sprint (37 ÷ 6).

[Insert Screenshot: Burndown chart]

6. Project Development Phase

Phase 1: Requirement Analysis & Planning

Objective

Customers often face delays and confusion while booking, tracking and managing parcel deliveries because they need to call support or use multiple apps. A conversational AI agent can simplify this by allowing customers to get live tracking and manage deliveries in one place.

Project Scope

1. Build a scalable CRM solution for parcel delivery businesses to manage customer bookings, shipments and delivery operations.
2. Support the end-to-end parcel lifecycle: booking → dispatch → tracking → delivery confirmation.
3. Include data model design, automation (Flows), AI-powered Prompt Builder and Agentforce.
4. Provide role-based access for admins, delivery agents and customers using permission sets and field-level security.
5. Ensure parcel visibility for customers through AI-integrated conversational support.

Objectives

- Streamline parcel operations by reducing manual updates.

- Improve customer satisfaction with transparent, self-service tracking.
- Enhance agent efficiency through guided Flows for status updates.
- Ensure security and reliability through controlled, role-based data access.

Users Involved

User	Role
Customers / Senders	Book parcels, track deliveries and receive updates through the portal or AI agent
Delivery Agents	Manage assigned parcels, update delivery status and ensure timely handover
Customer Support Team	Handle delivery issues and respond to customer queries
Admin Team	Configure the Salesforce environment, manage users, roles and security
System Integrator / Developer	Implement automation, AI agent setup and backend integrations

Tools Used

- Salesforce Developer Org: configuration, development and testing
- Prompt Builder (Agentforce AI): parcel tracking prompts and responses
- Salesforce Flow Builder: automation of tracking and delivery data retrieval
- Google Sheets / Docs: data planning, documentation and system mapping

Data Model

Object	Purpose
Parcel__c	Stores core parcel details (Parcel ID, Status, Weight, Estimated Delivery Date); linked to Sender
Delivery__c	Stores current location and estimated delivery date; linked to Parcel and Sender
Sender__c	Captures sender address, contact number and email; linked to multiple parcels
Receiver__c	Stores receiver address, contact and email; linked to Sender and Parcel

Security Model Design

Element	Design
Role Hierarchy	Administrator → Delivery Manager → Agent → Customer
Admin Profile	Full access to all objects and records
Delivery Agent Profile	Read/Edit access to Parcel, Delivery, Sender and Receiver
Customer Profile	Read-only access to own parcel details via Experience Cloud
Support Staff Profile	Access to Cases and Parcel details for issue resolution
Permission Sets	Additional privileges such as "Update Delivery Status"
Field-Level Security	Sensitive fields (emails, contacts, location) restricted to Admin and Agent

Phase 2: Salesforce Development – Backend & Configurations

This phase developed the core logic of SwiftShip Tracker: custom objects with relationships, a Prompt Builder template, and a Flow that supplies parcel data to the AI agent.

Milestone 1: Salesforce Account

Salesforce is a customer success platform designed to help organizations sell, service, market, analyse and connect with customers. A free Developer Edition org was created for this project.

1. Go to <https://developer.salesforce.com/signup>.
2. Enter first name, last name, email, job title (Developer), company (college name) and country (India), then click Sign Me Up.
3. Open the verification email and click Verify Account (may take 10 minutes to 2 hours).
4. Set a password and security question, then click Change Password.
5. You are redirected to the Salesforce Setup page.

[Insert Screenshot: Developer signup form]

[Insert Screenshot: Verification email and Change Password page]

[Insert Screenshot: Salesforce Setup Home]

Milestone 2: Objects Creation

Four custom objects were created: Parcel, Delivery, Sender and Receiver.

1. From Setup, click Object Manager.
2. Click Create → Custom Object.
3. Enter the label, plural label and record name as in the table below; set record name data type to Text.
4. Select Allow Reports, Allow Search and Track Field History; keep Deployment Status as Deployed.
5. Click Save (or Save & New for the next object).

Object	Label / Plural Label	Record Name	API Name
Parcel	Parcel / Parcels	Parcel Name	Parcel__c
Delivery	Delivery / Deliveries	Delivery Name	Delivery__c
Sender	Sender / Senders	Sender Name	Sender__c
Receiver	Receiver / Receivers	Receiver Name	Receiver__c

[Insert Screenshot: New Custom Object settings (Parcel)]

[Insert Screenshot: Parcel, Delivery, Sender and Receiver object details pages]

Milestone 3: Tabs

1. Go to Setup and type Tabs in the Quick Find box; click Tabs.
2. Under Custom Object Tabs, click New.
3. Select the object (Parcel, Delivery, Sender or Receiver) and choose a Tab Style.
4. Click Next, keep the Add to Profiles settings as default, and click Next.
5. On the Add to Custom Apps page, uncheck Include Tab.
6. Ensure "Append tab to the user's existing personal customizations" is checked, then click Save.
7. Repeat for each object.

[Insert Screenshot: Custom Object Tabs list]

Milestone 4: Fields & Relationships

Open Object Manager → select the object → Fields & Relationships → New, and create the fields below.

Parcel Object (Parcel__c)

Field Name	API Name	Data Type	Description
Parcel ID	Parcel_ID__c	Auto Number (P-{000})	Unique ID for each parcel
Status	Status__c	Picklist	Booked, In Transit, Out for Delivery, Delivered
Weight	Weight__c	Number	Weight of parcel
Estimated Delivery	Estimated_Delivery_Date__c	Date	Expected delivery date
Sender	Sender__c	Lookup Relationship	Gets details from Sender

Delivery Object (Delivery__c)

Field Name	API Name	Data Type	Description
Current Location	Current_Location__c	Geolocation	Location in latitude and longitude
Estimated Delivery	Estimated_Delivery_Date__c	Date	Expected delivery date
Sender	Sender__c	Lookup Relationship	Gets details from Sender
Parcel	Parcel__c	Lookup Relationship	Gets details from Parcel

Sender Object (Sender__c)

Field Name	Data Type	Description
Sender Address	Geolocation	Location in latitude and longitude
Sender Contact	Phone	To contact the sender
Sender Email	Email	To send email notifications

Receiver Object (Receiver__c)

Field Name	Data Type	Description
Receiver Address	Geolocation	Location in latitude and longitude
Receiver Contact	Phone	To contact the receiver
Receiver Email	Email	To send email notifications
Sender	Lookup Relationship	Gets details from Sender
Parcel	Lookup Relationship	Gets details from Parcel

[Insert Screenshot: Fields & Relationships for each object]

Milestone 5: Prompt Builder

1. Go to Setup → Prompt Builder and click New Prompt Template.
2. Select the Record Summary template type and choose the object Parcel (Parcel__c).
3. Enter Label: Retrieve Parcel Details; API Name: Retrieve_Parcel_Details; Description: Retrieves parcel details where Parcel_ID matches the user input.
4. Enter the prompt template content shown below.
5. Insert Parcel__c as a resource and add the fields Name, Parcel_ID__c, Status__c, Weight__c and Estimated_Delivery_Date__c.
6. Click Save, then Activate to make the template available to the agent or flow.

Prompt template content:

Retrieve details from Parcel__c where Parcel_ID__c matches user input.
Return response in this format:

Parcel Tracking Update

```
- Parcel Name: {!$Input:Parcel__c.Name}
- Parcel ID: {!$Input:Parcel__c.Parcel_ID__c}
- Status: {!$Input:Parcel__c.Status__c}
- Weight: {!$Input:Parcel__c.Weight__c}
- Estimated Delivery Date: {!$Input:Parcel__c.Estimated_Delivery_Date__c}
```

[Insert Screenshot: Prompt Builder template editor]

Testing the prompt: Use the Preview option with a sample parcel record. The resolved prompt and generated response should show the parcel name, ID, status, weight and estimated delivery date.

[Insert Screenshot: Prompt preview showing Resolved Prompt and Generated Response]

Milestone 6: Flows

An Autolaunched Flow was created so the agent can pass a Parcel ID and receive the generated tracking summary.

1. Go to Setup → Flows → New Flow and choose Autolaunched Flow (No Trigger).
2. Create variable "ids" (Text, Available for Input).
3. Create variable "output" (Text, Available for Output).
4. Add a Get Records element (label: Get Parcel Records): Object = Parcel; condition Parcel_ID__c Equals {!ids}.
5. Add an Action element using the Retrieve Parcel Details prompt template (label: Parcel Updates); set objectToSummarize to the Parcel record from Get Parcel Records.
6. Add an Assignment element (label: Assignment Outputs): set variable output Equals the Prompt Response from the action.
7. Connect Start → Get Records → Action → Assignment → End.
8. Save the flow with the name Parcel Details and click Activate.
9. From the Flows list, open the dropdown for the new flow, click Edit Access, and assign the required profiles under Flow User Access. Click Save.

[Insert Screenshot: Flow canvas: Start → Get Records → Action → Assignment → End]

[Insert Screenshot: Input and output variables]

[Insert Screenshot: Flow user access (Edit Access)]

Phase 3: UI/UX Development & Customization

This phase enables agents to manage parcel operations with secure access control, using permission sets and an AI-driven agent built with Agentforce.

Milestone 1: Creating Permission Sets

1. In Setup, type Permission Sets in Quick Find and click Permission Sets under Users.
2. Click New and enter Label: Swift Ship (API name auto-fills) and License: Einstein Agent. Click Save.
3. Open Object Settings from the permission set page.
4. For each object (Parcel__c, Delivery__c, Sender__c, Receiver__c), click Edit and enable Read, Create and Edit (Delete optional).
5. Under Field Permissions, ensure at least Read access is checked for all key fields.
6. Click Save after each object.

[Insert Screenshot: Swift Ship permission set overview]

[Insert Screenshot: Object settings for Parcel__c, Delivery__c, Sender__c and Receiver__c]

Milestone 2: Assigning Permissions to the Agent User

1. In Setup, type Users in Quick Find and click Users.
2. Open the EinsteinServiceAgent User record.
3. Scroll to Permission Set Assignments and click Edit Assignments.
4. Select Swift Ship from Available Permission Sets, click Add, then Save.

[Insert Screenshot: EinsteinServiceAgent User with Swift Ship permission set assigned]

Milestone 3: Org Setup for Agentforce

1. Search Salesforce Go in Quick Find, find Default Agent, click Get Started, turn it on and refresh the page.
2. Go to Setup → Einstein Setup and turn on: Turn On Einstein, Global Languages and Deploy Prompt Templates.
3. Refresh the browser page.
4. Go to Setup → Agentforce Agents and turn on Agentforce and Enable Agentforce Default Agent.

[Insert Screenshot: Einstein Setup toggles]

[Insert Screenshot: Agentforce Agents page with Agentforce enabled]

Milestone 4: Building the Agent

1. In Setup, open Agentforce Agents, click the default agent and click Open in Builder.
2. Under Subagents, click New → New Subagent. Describe it as: "The Agent should give the parcel details related to the user, by asking for the parcel Id." The resulting subagent is named Parcel Details Inquiry.
3. Open Agentforce Asset Library → Actions → New Agent Action; select Reference Action Type = Flow and choose the Parcel Details flow. Configure the agent action details.
4. In Agent Builder, open the Parcel Details Inquiry subagent → This Subagent's Actions → New → Add from Asset Library, select the Parcel Details flow action and click Finish.
5. Click Settings, rename the agent to SwiftShip Tracker and click Save.
6. Click Activate. If a Configuration Issues Detected message appears, click Ignore & Activate.

[Insert Screenshot: Create a Subagent dialog]

[Insert Screenshot: Create an Agent Action (Flow)]

[Insert Screenshot: Subagent actions with Parcel Details flow]

[Insert Screenshot: Edit Agent Details (renamed to SwiftShip Tracker)]

Phase 4: Data Migration, Testing & Security

This phase validates the functionality and reliability of the SwiftShip Tracker agent: that it recognizes the correct topic, triggers the assigned Flow, retrieves parcel data, and works without access or permission issues.

Verify Agent

Go to Setup → Agentforce Agents and confirm the SwiftShip Tracker agent appears in the list and is Active.

[Insert Screenshot: Agentforce Agents list showing SwiftShip Tracker (Active)]

Validate Assigned Subagent

- In Agent Builder → Subagents, confirm Parcel Details Inquiry is listed, with a classification description and scope related to parcel management.
- Under This Subagent's Actions, confirm the Parcel Details flow action is linked.
- Save and ensure the agent version is Active.

[Insert Screenshot: Subagent configuration and linked action]

Check the Flow Association

- Go to Setup → Flows and locate the Parcel Details flow.
- Confirm the flow is Activated and includes: parcel ID input (ids), parcel details retrieval (Get Records + Action) and the output assignment.
- In the flow's Advanced Settings, use Run in System Context (Without Sharing) if data access is restricted.

[Insert Screenshot: Parcel Details flow (Active)]

Activate and Test the Agent

1. Return to Agent Builder → SwiftShip Tracker and click Activate (if not already active).
2. In Conversation Preview, type: "hi", then "can I get my parcel details", then "sure my parcel ID is P-123".
3. Observe the agent's reasoning (topic selection and action selection) and its response.

[Insert Screenshot: Conversation Preview with Parcel Tracking Update response]

Validate Data in Salesforce

- Open App Launcher → Parcels (Parcel__c) and search for the Parcel ID used in testing.
- Verify the Status and other fields match the agent's response.
- Open the related Receiver record and verify the linked parcel, contact, email and address.

[Insert Screenshot: Parcel and Receiver records in Salesforce]

Phase 5: Deployment, Documentation & Maintenance

Deployment Scope

The purpose of this phase is to confirm that the SwiftShip Tracker agent, created using Salesforce Agent Builder, works as intended within the Salesforce Developer Org. Testing in the Developer Org simulates how the agent would perform in a live setup and ensures permissions, flows and interactions function correctly before any deployment stage.

Production-level testing (UAT or sandbox deployment) is not performed in this project because:

- Developer Edition orgs are standalone environments and do not support production-linked testing environments.
- Enterprise-level Agentforce deployment involves sandbox testing, staging environments and CI/CD automation, which are outside the scope of this academic prototype.

Maintenance, Monitoring & Troubleshooting

Ongoing maintenance keeps Parcel, Sender, Receiver and Delivery data accurate, synchronized and up to date. Regular monitoring helps detect misrouted agent queries, failed Flow executions and performance delays in Agentforce responses. Troubleshooting includes resolving configuration errors, updating Flow logic, refining agent subagents and improving prompts to enhance user interactions.

Although implemented in a Developer Org for learning, these practices are essential in real-world deployments so that AI-powered service agents remain reliable, scalable and aligned with changing customer service operations.

7. Functional & Performance Testing

Testing was carried out in the Salesforce Developer Org using screenshots captured during execution. The features below were verified for correct functionality.

TC	Test Case	Steps	Expected Result	Result
TC-1	Object creation	Create Parcel, Delivery, Sender and Receiver objects	Objects deployed with Reports, Search and Field History enabled	Pass
TC-2	Relationships	Create lookup fields between Parcel, Sender, Delivery and Receiver	Related records link correctly	Pass
TC-3	Prompt template	Preview Retrieve Parcel Details with a sample parcel	Resolved prompt and generated response show parcel details	Pass
TC-4	Flow execution	Run Parcel Details flow with a Parcel ID	Flow returns prompt response in the output variable	Pass
TC-5	Permissions	Assign Swift Ship permission set to agent user	Agent can read parcel, delivery, sender and receiver data	Pass
TC-6	Agent topic selection	Type "can I get my parcel details"	Parcel Details topic selected; agent asks for Parcel ID	Pass
TC-7	Parcel tracking	Type "sure my parcel ID is P-123"	Agent returns name, ID, status, weight and estimated delivery date	Pass
TC-8	Data validation	Open Parcels and Receivers tabs	Records match agent response	Pass

Performance: In Conversation Preview, topic selection completed in about 0.22 seconds and action selection in about 0.38 seconds, so the agent responded promptly.

[Insert Screenshot: Test result screenshots]

8. Advantages & Disadvantages

Advantages

- Centralized parcel and customer information in Salesforce.
- Better visibility into parcel booking and delivery tracking.
- Automates key logistics processes using Salesforce Flow.
- Agentforce enables conversational customer support and parcel-status assistance.
- Prompt Builder supports AI-powered responses and self-service.
- Reduces manual effort for customers, support teams and administrators.
- Can support integration with external logistics systems.
- Can scale to support multiple locations and growing parcel operations.

Disadvantages

- Requires accurate and up-to-date parcel and customer data.
- Dependence on Salesforce configuration and automation.
- Agentforce responses depend on properly configured prompts and available data.
- External logistics integrations may increase implementation complexity.
- Flow and automation logic require regular maintenance when processes change.
- Users need appropriate Salesforce or Experience Cloud access.
- Initial Salesforce implementation and configuration can require significant effort.

9. Conclusion

SwiftShip Tracker demonstrates how Salesforce can be used to build a centralized parcel management and tracking solution. The project implements custom objects and relationships, Prompt Builder, Salesforce Flow, Agentforce AI and permission-based security to support parcel tracking and conversational customer assistance.

The integration of Agentforce AI with Prompt Builder and Salesforce Flow provides a conversational approach to parcel tracking, enabling customers to obtain shipment information without depending on manual support. The project provides a practical foundation for a scalable and user-friendly parcel management solution.

10. Future Scope

- Extend Agentforce capabilities to more parcel-management queries, such as booking and status updates.
- Enhance real-time delivery tracking.
- Expand customer self-service through Experience Cloud.
- Add automated email and SMS notifications at every delivery stage.
- Add reports and dashboards for delivery-performance analytics.
- Add Apex triggers and Batch Apex for automated parcel and delivery processing.

- Integrate additional external logistics systems.
- Improve AI prompts and conversational experiences.
- Introduce enterprise-level sandbox and CI/CD deployment.

11. Appendix

Ref	Category	Items
A	Custom Objects	Parcel, Delivery, Sender, Receiver
B	Standard Objects (planned)	Account, Contact, Case, Task, EmailMessage, User
C	Automation	Autolaunched Flow (Parcel Details); planned: Approval Processes, Email Alerts
D	Apex (planned)	Apex Classes, Batch Apex
E	AI	Agentforce AI, Prompt Builder (Retrieve Parcel Details), SwiftShip Tracker agent
F	UI	Custom Object Tabs; planned: Lightning App, Record Pages, Experience Cloud
G	Security	Permission Set (Swift Ship), Field-Level Security; planned: Profiles, Roles, Sharing Rules
H	Analytics (planned)	Reports & Dashboards
I	Testing	Flow, Agentforce, data retrieval, security and permission validation

Thank You
